

$r(t)$ across 5 good runs (treecode N=10000)
(thick = median of median-r, shading = full range; dashed = CM offset from all-particle CM)

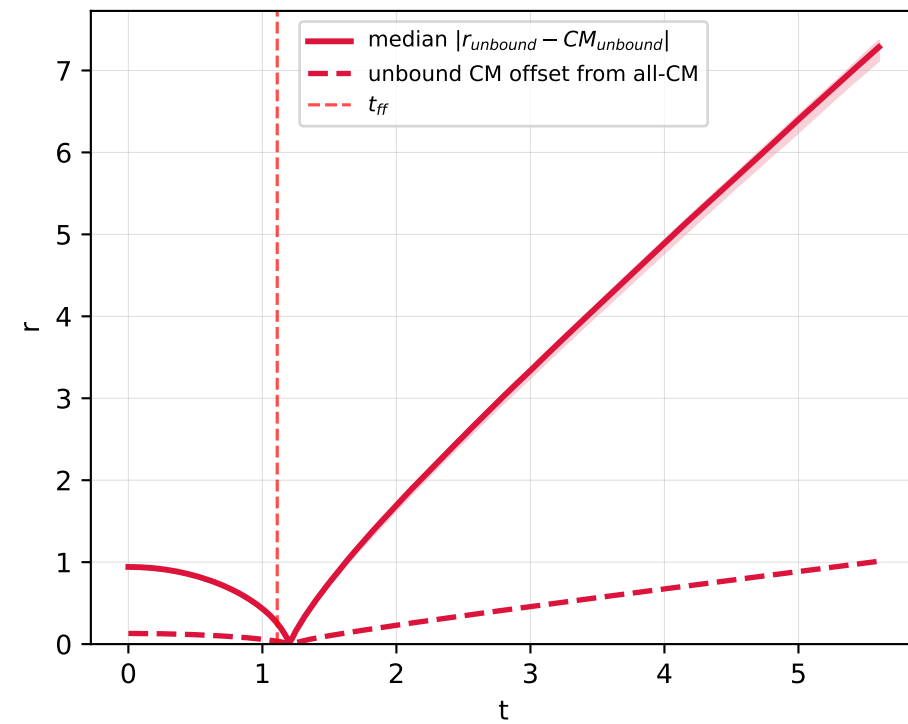

All particles

Bound particles
(r from bound CM)

Unbound particles
(r from unbound CM)

Center-of-mass tracks
dashed = $|CM_{all} \text{ drift}|$ ($\rightarrow 0$ if momentum conserved)
